

Pro2SQL

Progress to SQL Database Replication

Compared to similar replication products, Pro2SQL is by far the easiest to configure, setup and requires minimal effort to manage and maintain. This is a critical business application and its stability, up-time and low maintenance are impressive. Great product!

Is your corporate reporting solution based on SQL Server? Would you like to have easy, consistent, and reliable access to the information in your Progress database *via your SQL Server reporting solution*?

With Pro2SQL, you create a conduit for transferring Progress data into a SQL Server database for efficient reporting and analysis. As your data is updated in Progress, it is replicated in SQL Server. With your Progress and SQL Server databases virtually in sync, you can use your Microsoft reporting solutions for up-to-date reports and business intelligence against the data supplied by Progress.

BRAVEPOINT®

Progress experts, keeping our promises since 1987.

Pro2SQL has saved us both time and money by providing Progress to SQL replication in as close to "real-time" as you can get. Our previous solution took hours to accomplish what Pro2SQL does in seconds!

Pro2SQL

- ▼ Replicates all 4GL datatypes
- ▼ Graphical administration & monitoring tool
- ▼ Asynchronous replication – transactions replicate when completed
- ▼ Generates SQL statements to create SQL tables
- ▼ Supports multithreading
- ▼ Causes minimal disk I/O in Progress
- ▼ Small additional footprint in database

A Small Footprint

Pro2SQL takes up very little space in your Progress database. What little space it does take is easy to monitor from your Pro2SQL monitoring tool.

Create a "Data Warehouse"

Pro2SQL is especially useful for Microsoft shops running a Progress application. Using the graphical administration and monitoring tool, you can easily pick the tables and columns you would like to replicate to the SQL Server database. The tool will generate SQL statements needed to create the tables and initialize the data in those tables in the SQL Server database.

With Pro2SQL enabling easier access to your data, it becomes very simple to run your reporting solution and monitor activity on your SQL Server database.

Time-saving Accessibility!

Remember when you had to extract Progress Data and dump it into a SQL database just to run reports? Remember how, after it was extracted, the data was already outdated? Not anymore...not with Pro2SQL.

Call us for more information on the best solution to make the information in Progress applications accessible for custom reporting and analysis on a Microsoft platform.
